

A6 FLYER (105x148.5MM)

SAFE AREA

Important information should remain inside this safe area. All images and text should be high resolution (300dpi) or Vectorised for a good quality print.

TRIM LINE

Your prints will be trimmed on the black dashed lines. Initial cuts may be slightly incorrect and can be trimmed in the grey trim area or bleed area, do not put any text within these areas.

BLEED AREA

All images or block colours which you would like on the trim line should extend to the end of the 3mm bleed area. The bleed area allows us to compensate for the initial incorrect trimming by cutting the final cuts to the exact dimension without having a white border on the other side.
